                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 AAASWIITCVLLCCSKHARCFILLVFLSCGLREGRNALIAAGTGIVILGHVENIFHNFKG 120
                                                                                                                                                                                                                                                                                                           The present sequence is human dendritic cell specific transmembrane protein (DC-STAMP). The DC-STAMP is useful in forensic sciences, e.g. to distinguish rodent from human or as a marker to distinguish between different cells exhibiting differential expression or modification patterns. The DC-STAMP and its antibodies are used for preparing kits for use in molecular biology, immunology or physiology, and in treatment of conditions associated with abnormal physiology or development, e.g. allergic conditions (asthma), cancer and autoimmune diseases (diabetes mellitus). Drug screening using DC-STAMP or its fragments can be performed to identify compounds having binding affinity to or other relevant isolation effects on the function of DC-STAMP. The DC-STAMP can also be used in diagnostic kits and methods for detecting the presence of another DC-STAMP or binding partner.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

protein genes, and AAB87342-AAB88413 represent the proteins they encode protein genes, and AAB87342-AAB88413 represent the proteins they encode AAB8744-AAB88745 represent the proteins they encode and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 25 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoletic disorders, diseases of the immune system, allorimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinsons's disease), cognitive disorders, schizophrenia, asthma, cardiovascular disorders, angiogenic disorders, atherosclerosis, cardiovascular disorders, pregnancy-related disorders, endocrine

   healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their culture of primary tissues, to regenerate tissues, to identify their ligands or binding partners, and in chemitaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      QFQSLPGFEVHLKLHGEKQGTQDIIHDSSFNISVFEPNCIPKPKFLLSETWVPLSVI 383

The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, disorders (e.g. crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AlDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzhaimer's, Parkinson's, Creutzfeldt-Jacob disease, cneephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG65518 represent albumin full fusion proteins of the invention.

The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum, albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, diseased disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AlDS), endocrine disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephlowyellitis, meningitis, schizophremia), and connective disorders (e.g. osteoporosis, arthritis). ABG65326-ABG65518 represent albumin fusion proteins of the invention.

The polymutecolus sequences given in Ambayano to Ambours encoure the main secreted proteins given in Ambayano to Ambayano the main secreted proteins given in Ambayano to Ambayano the main secreted proteins and proteins and proteins and cells the genes are expressed in the exemplification of the present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic, immunosuppressive, nootropic, narrionflammatory; anticolory anticolory anticolory; anticolory anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; anticolory; antico
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          86

                  AAD08345-AAD08394 represent cDNAs corresponding to 50 human secreted protein genes and AAE03898-AAE03947 represent the proteins they encode. AAE03948 AAE03996 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene

therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 50 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, focetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Albraimer's disease, a parkinson's disease), cognitive disorders, schizophrenia, ashma, c. Rin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, extin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound can aling and epithalial cell proliferation, to prevent skin aging due to culture of primary tissues, to regenerate tissues, to identify their contains and and the bush of and addition or presentations and in chemotaxis, and can be used as a food addition or presentation; of company tissues and in chemotaxis, and be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                  AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87444-AAB87444 human secreted proteins they encode. AAB87444-AAB8745 represent human secreted proteins they encode. AAB87444-AAB8745 represent human secreted proteins they encode in their corresponding secreted proteins are useful for preventing, therapy. Pathological conditions can be diagnosed by determining the encount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the sense, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental about a manualities, haematopoietic disorders, diseases of the immune system, albus, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, parkinsons's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, andiogenic disorders, kidney disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin adjag due to sumbran, to maintain organs before transplantation, for supporting cell contracts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                146
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 LSCGLREGRNALIAAGTGIVILGHVENIFHNFKGLLDGMTCNLRAKSFSIHFPLLKKYIE 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a badditive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MDFIQHLGVCCLVALISVGLLSVAACWFLPSIIAAAASWIITCVLLCCSKHARCFILLVF

AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87415 represent the proteins they encode. AAB87414-AAB8742 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 55 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; secreted protein; proliferative disorder; cancer; tumour; foetal abnormality; haematopoietic disorder; immune aystem disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; inflammation; allergy; neurological disorder; Alzheimer's disease;

AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87444. Perpresent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing. CC therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mitations in the new genes. Specific uses are described for each of the sequences. Specific uses are described for each of the sequences. Specific uses are described for each of the sequences. Specific uses are described for each of the sequences, cancer, tumours, feetal and developmental developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, feetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, cardiovascular disorders (e.g., Alzheimer's disease, cardiovascular disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound subnaring and epithelial cell proliferation, for prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell contains and in chemotaxis, and can be used contains and in chemotaxis, and can be used contains and in the partners, and in the contains the mean and the partners.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 LSCGLREGRNALIAAGTGIVILGHVENIFHNFKGLLDGMTCNLRAKSFSIHFPLLKKYIE 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, diseasing of a conjited immunodeficiency syndrome, AlbS), endocrine disorders (e.g. acquired immunodeficiency syndrome, AlbS), endocrine disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease in engalitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG65518 represent albumin fusion proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              86

The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and disorders such as cancer, reproductive disorders, disestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzhaimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABGG65518 represent albumin tuesion proteins of the invention.

CC AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the protein they encode. AAB87414-AAB87444 for perseent human secreted proteins they encode. AAB87444-AAB87444 for perseent human secreted proteins are useful for preventing. CC treating or ameliorating medical conditions are useful for preventing, the therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, correlative disorders (e.g., theumatoid arthritis), inflammation, allergies, neurological disorders, (e.g., Alaheimer's disease, extensions, sideases, cognitive disorders, schizophrenia, asthma, allergies, neurological disorders, schizophrenia, asthma, allergies, neurological disorders, schizophrenia, asthma, allergies, neurological disorders, kidney disorders, cardiovascular disorders, preparacy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound content epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, for supporting cell colluture of primary tissues, to regenerate tissues, to identify their cognate ligande or binding partners, and in chemotexis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in allergies and protein of the invention can be used in in diagnostic immunoassay e.g., radioimmunoassay or enzyme linked immunoassay e.g., radioimmunoassay or enzyme linked inmunoassay e.g., radioimmunoassay or enzyme linked in neuron of primers in enveloper experience of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                   (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                   (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 231 MKRFLGPCGWKYENIYITROFVOFDERERHOORPCVLPLNKEERRKYVIIPTFWPTPKER

This invention describes novel human genes and the secreted proteins they encode. The polymucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliotating medical conditions e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polymucleotides. Specific uses are described for each of the polymucleotides of the invention, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or reatment of cancer, tumors, neurodegenerative disorders, developmental abnormalities, blood disorders, lenkemias, diseases of the immune system, autoimmune diseases, hepatic and renal disease, inflammation, allergies, autoimmune diseases, hepatic and renal disease, inflammation, allergies, infections, AlDS, transplant rejection, diabetes, asthma, sepsis, cardiovascular disorders, and metabolic disorders. The polypeptides can also be used as food additives or preservatives. The polypeptides are also useful for identifying their binding partners. AAX45289 represent the human secreted proteins can be accounted by the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18;

The invention is useful in developmental biology and in elucidating cell signalling and cell.cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins

Patent No. 6031150
GENERAL INFORMATION:
APPLICANT: Joseph Bryan, Lydia Aguilar Bryan, Daniel Nelson
TITLE OF INVENTION: Sequence Encoding Mammalian Sulfonylurea Receptor
Patent No. 6031150
TITLE OF INVENTION: and Method of Detecting Persistent Hyperinsulinemi
TITLE OF INVENTION: Infancy
NUMBER OF SEQUENCES: 49
CORRESPONDENCE ADDRESS:
                                                                                                                                         65 WIITCVLLCCSKHARCFILLV----FLSCGLREGRNALIAAGTGIVILGHVENI--FHN
